Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn
Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.

Cloning and expression of complementary DNAs for multiple members of the human cytochrome P450IIC subfamily Biochemistry 30, 3247-3255 (1991) 91182740

(bases 1 to 323)

MEDLINE REFERENCE JOURNAL

TITLE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                88241 88340: gap of 100 bp
88341 205791: contig of 117451 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           88240: contig of 88240 bp in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'working draft' sequence. It currently consists of 28 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                     Center: Washington University Genome Sequencing Center

Ramataki,T.
Six-base deletion occurring in messages of human cytochrome P-450
in the CYP2C subfamily results in reduction of tolbutamide
                                                                                                                    GenBank staff at the National Library of Medicine created this entry [NCBI gibbsq 117179] from the original journal article. This sequence comes from Fig. 1.

Author also gives sequence for another cytochrome P-450 that contains a 6-base deletion of nucleotides 783-788.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0; Gaps

between regions of nucleic acids that were separated by intervening sequence, and also for determining boundaries present in genes containing group 1 type introns such as Tetrahymena FRNA, where self-splicing occurs in the presence of guantonism cofactor. The present sequence is human cycochrome P450 (F79450) A219 gene related to the invention.

The present invention relates to a method for determining gene structure when the general sequencies using when the general sequencing the gene across exon-intron boundaries using evenly spaced persents or tiled primers or tiled primers comprises uncleic acids that hybridise to the known coNA sequence of the gene at about 100:300 base intervals and the gene comprises the template. Gene structure can be determined without the need to sequence the entire gene. The method provides information necessary to determine gene structure and phenotypic expression without the need to sequence entire chronosomal ropy of the gene or fragment. The methods are useful in germline sequence variation analysis. The method is also useful for determining the boundaries

Sequences news...

biallelic markers. The sequences are travers. If (MSTII), malater it clicitating microscans glutathinose S-transferase II (MSTII), malater decarboxylase enzyme (DMI-NEI), cytochrome p450, glutathione created grammage (GSR-NEI). Cytochrome p450, glutathione created compared (GSR-NEIS). If latin containing monoxyptenases (FMD).

Semence and compared (GSR-NEIS). [latin containing monoxyptenases (FMD).

Contains a biallelic marker/polymorphism, which is represented in the sequence as a degenerate-undefined base. The genes of which the biallelic marker containing sequences are related are involved in drug metabolism. Containing sequences are related are involved in drug metabolism. Containing sequences are related are involved in drug metabolism. Containing sequences are related are involved in drug metabolism. Containing in chief and four alternative MSTII cohe sequences. AMSTIGO research in the marker in the semantic sequences. AMSTIGO are used in an example for the amplification of human genomic DNA fragments. The content of a mucleotide at a DNE- or MSTII-related bialielic marker in comparation of an allele of a DNE- or MSTI-related bialielic marker and containing the deficient and allele of a DNE- or MSTI-related bialielic marker and containing the papalation of an allele of a DNE- or MSTI-related bialielic marker and containing the containing training the deficient of a distribution of a dis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ne whether an individual suffers or is at risk of developi

The present sequence encodes a fusion proteins comprising a portion of a abacterial cytochrome P450 protein and also a portion of a mammalian cytochrome P450 protein. The fusion protein can oxidise hydrocarbons or any compound having a carbon-hydrogen bond. The fusion protein can be used for hydroxylating a compound to be oxidised. It can also be used in the bioremediation of an environmental pollutant. Since the fusion protein is soluble, it can be subject to structural elucidation proystallography for designing functional proteins. It can be readily expressed in soil bacteria to facilitate bioremediation.
                        Bacterial and mammalian chimeric cytochrome P450 protein encoding DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New P450 fusion proteins - comprising a portion of a bacterial cytochrome P450 protein and a portion of a mammalian cytochrome P450 protein

This polypeptide is used in a method to screen for a drug that is setabolised by a cytochrome P450 having 5-mephenytoin which the setabolised scitify. The protein can also be used to identify a suragealic carcinogenic or cytochrome pais between the passes and the passes capable of metabolising xenobogation or cytochrome compound. Cytochrome P450 are a large family of basemprotein enzymes capable of metabolising xenobiotics enchanges careful pollutants as well as enchabolistics such as attentioners and prostaglanding.

```
The nucleotide sequence of the CDNA encoding the human cytochrome P450

Steedes ACS. The gene encodes a protein of 491 amino acids. The CDNA

vas amplified by PCR using the primers AA087735-8. The product was

Clouded into the yeast expression vectors PAM310 or PAMRR to produce the

vervors p2C9 for the expression of the cytochrome P450 alone or p2C9R

Compound by reacting the chemical compound with recombinantly produced

The vectors are used in a method for evaluating the safety of a chemical

Compound by reacting the chemical compound with recombinantly produced

(AA087718) or AM (AA087717), or their autiliary species and variants

C. (AA087718) or and yeast NADPP P450 reductase, either as a fused protein

or in cell erracts, and manipsing the resulting metabolite to assess the

safety of the chemical compound. The metbod is useful for determining

whether the chamical compound. The metbod is useful for determining

whether the chamical compound. The metabolite, will be converted into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Buman cytochrome P450; amplification; PCR; primer: expression vector;

This is the nucleotide sequence of the human cytochrome P456 molecular species 259 gene which encodes a protein of 490 maino scide. The gene species 259 gene which encodes a protein of 490 maino scide. The gene wish when human liver derived cDNA library as 2 fragments of 0.9 and 0.6 kb using primers AAT2655.8. The prod. ass cloned into the 200 main and 0.6 kb using primers AAT2655.8. The prod. ass cloned into the 200 main and 0.6 kb using primers AAT2655.8. The prod. ass cloned into the 200 main and 0.6 kb using primers AAT2655.8. The prod. ass cloned into the 200 main and 200 main a or not rendered carcinogenic or "unsafe" if it is not d metabolised to a carcinogenic cpd. Sequence 1473 BP: 413 A: 345 C: 319 G: 396 T: 0 other:

                                                                                         Buman derived cytochrome; P450209; commercial cDNA library; yeast; transfection; recombinant production; expression vector; mammal; immuniation; densitiation; antibody; determination; detection; non-cross reactive; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes the human derived cytochrome (HDC) 945029, which was obted from a commercial cDNA library. Teast were transfected with an expression vector contg, the HDC cDNA cultured and then disrupted to give a nicrosomal fraction. The EDC was purified from the fraction, and used to lammalise and sensities a mammal. Blood vas drawn from the mammal, and an anti-HDC atthody isolated. The antibody obtd. recognises HDC 9405029, partic. at a serum dilution rate of 1:10000, and is substantially without cross reaction to other HDC 9450 spp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antibody recognising human derived cytochrome P4502C9 - allows specific detection of cytochrome P450 species in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1473 BP; 413 A; 345 C; 319 G; 396 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Pages 11-13; 13pp; Japanese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Busan derived cytochrome P4502C9 cDNA.

                                                                                                                                                                                                                                                                                                                The present invention describes a fusion proteins comprising a portion of a bacterial cyrochrome P400 protein and also a portion of a mammalian cyrochrome P400 protein and also a portion of a mammalian cyrochrome P400 protein. The fusion protein can oxidise hydrocarbons or any compound having a carbon-hydrogen boad. The fusion protein can be used for hydroxylating a compound to be oxidised. It can also be used in the bloremediation of an environmental pollutent. Since the fusion protein is anoluble, it can be subject to structural elucidation by X-ray expressed in soil becteria to facilitate bioremediation. The present sequence encodes amamalian cytochrome P450 protein CTP2C9 from the present invention.

The sequences given in AAT11378-81 encode allelic variants of cytochrome 7450 C9. The majority of clones isolated from liver 533 coded for 259. The majority of clones isolated for 269. The 509 clones encoding 269, only two allelic variants were found. 39 of the 209 clones were identical with clone 55, and il were ledentical 39 of the 209 clones were identical with clone 55, and il were ledentical 39 of 31-noncoding regions but contained 2 single base changes at positions 50 of 01075 and 1435. One of these base changes was conservative but the other results in one amino acid difference at position 359. Ille to Leu. The clones 20c and 60 differ by one nuclectide in the coding region of the position 354. Anchor results in a single amino acid change. This to Met at position 355. Clone 25c has a very long, 198 bp. 5° noncoding region 50 has an unusually long 3' noncoding region containing three positiole 50 has an unusually long 3' noncoding region containing three positiole 50 has an unusually long 3' noncoding region containing three positiole 50 has an unusually long 3' noncoding region containing three positiole 50 non-coding regions could represent alternate splicing, allelic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated cytochrone P450 2c subfamily member - used for identifying drugs metabolised by 5-mephenytoin 4'-hydroxylase activity and to develop other screening assays

Screening for drugs metabolised by cytochrome P450 - for identifying mutagenic, carcinogenic, or cytotoxic compounds

Example 2; Column 53-56; 63pp; English.

This sequence encodes a human cytochrome P450 2C9 polypeptide isolated from clone 65. This polypeptide is used in a method to screen for a drug that is metholised by a cytochrome P450 having S-mephenytoin 4'-hydroxylase extivity. The protein can also be used to identify a mategaenic, cycloneme P450 are a large family of hemosprotein enzymes capable of metabolising xenoblotics such as drugs carcinogens and environmental pollutants as well as

Sequences AM51110-AM151593 represent human DNA fragments which contain bala leit te markers. The sequences are related to various human genes including microscanal glutathione 5-transferase II (MG5711), malate decarboxylase enzyme (DME1/ME1), cytcchrome P450, glutathione. Teductase/synthase (GME1/ME15), flavin-containing monocysquenses (FMO), gamma-glutamyltransferase 5 (GMF5), dipeptidase (DP), glucose 6-phosphate

Amyltrans.

Polynucleotides comprising sequences from malate decarboxylase enzyme-related biallelic markers used for genotyping

debydrogenase (G6DDB), phosphogluconate dehydrogenase (PGDB), and uridine diphosphate glucoronosyl transferases (UGT2). Each of these sequences contains a biallelic marker/polymorphism, which is represented in the sequence as a degenerate/undefined base. The genes to which the bialloic marker containing sequences are related are involved in drug metabolism. Sequences AMB1518 represent the generate of the SETI game products PCR primers AMB15189 and AMB1509 and AMB1500 are MESTII game products PCR primers AMB15199 and AMB1500 are used in a cample for the amplification of human genomic DNA fragments. The invention includes a method of genotyping comprising determining the invention and unletted at a DNE or MCSTII related biallelic marker in a biological sample. The method is used to determine the frequency in compulation of an allele of a DNE or MCSTII related biallelic marker and to select an individual for inclusion in a clinical trial of a drug createment. The method is also used to detect association between haplotype and phenotype.

Createment and to detect association assays, sequencing assays or allele specific amplification assays. The method can association assays, sequencing assays assimate an individual saffers or is at risk of developing matters.

```
This invention describes a recombinant cytochrome P450 protein which is purified from a host cell culture using a combination of detergents and enzyme inhibitors. The method comprises (a) fractionating the host cells to prepare their membranes, (b) adding a non-ionic detergent to the membranes, (b) adding a non-ionic detergent to the membranes in a concentration of 0.8 % to 2% % tw/v) in a detergent to the membranes in a concentration of 0.8 % to 2% with a non-ionic detergent to the membranes in a concentration of 0.4% to 0.8% w/v) in a detergent to the membranes in a concentration of 0.4% to 0.8% w/v) in a purifying the protein ratio of between 2:1 to 4:1 (d) centrifuging the protein through a diethylaminoethyl-beaded column, then through a carboxymethyl-beaded column, and finally through a carboxymethyl-beaded column, and finally through a carboxymethyl-beaded column, and finally through a carboxymethyle or catalysing the oxidation of drugs, steroids, carcinogens and pesticides. The method simplifies the column for M450 proteins by the use of improved expression vectors and novel detergent combinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytochrome P450; detergent; enzyme inhibitor; non-ionic; ionic; purification; drug oxidation; steroid; carcinogen; pesticide; human; ss

Purifying recombinant cytochrome P450 · by utilising novel combinations of detergents and enzyme inhibitors

This invention describes a recombinant cytochrome P450 protein which is purified from a host cell culture using a combination of detergents and engrge inhibitors. The method comprises (a) fractionating the host cells to prepare their membranes, (b) adding a non-ionic detergent to the membranes (b) adding a non-ionic detergent to the membranes in a concentration of 0.8% to 2% tells in a tell of between 4:1 to 10:1, (c) adding an ionic detergent to the membranes in a concentration of 0.4% to 0.8% v/v) in a cetergent protein ratio of between 4:1 to 10:1, (c) adding an ionic detergent protein ratio of between 2:1 to 4:1 (d) centrifuging the membrane-detergent mixture to remore insoluble materials and (e) purify trying the protein through a deterhyminoschyl-beaded column, then chrough a carboxymethyl-beaded column, and finally through an ordering super to purify cycochrome P450 corteins which are responsible for catalysing the oxidation of e150 corteins which are responsible for catalysing the oxidation of e160 purify cycochrome P450 proteins and pesticides. The method simplifies the complement of P450 proteins, by the use of improved expression vectors and novel detergent combinations. Disclosure; Column 53-54; 91pp; English.
